

PROS AND CONS OF ASHAIRAS' HABIT DOCTRINE

Abstract This study deals with Ashairas opinion that objects are denied of these properties, These objects are devoid of any potentialin e.g fire has no powen of Combustion are what man usually observes is mere a habit. Ashaira did not orly relate this believe to the msdves but to the Holly Quran and prophetic Tradition.

Accordingly, this study refutes such allegations and proves that things and objects are impregnatecl with latent forces e.g water causes plantgraat the eye has the power to see etc. Therefore, who ever denies such properties, is equaliginy between binary things ignoring what science has achived in the fied of atomic energy and the use of this energy in serviny man and Nature.

Elashaeras opinion as such is foundless and invalid. The Naturalists dogma has also envalidated their assumption. These assumptions were found to be for away from Quran the book which reveals that Nature is endowed with potentialities governed by the will of Alla (God).
